carmenes

What is CARMENES?

/kár-men-es/

- a) An instrument
- b) A consortium
- c) A science project
- d) All of the above

What is CARMENES?

- a) An instrument (for the 3.5 m telescope on Calar Alto)
- b) A consortium (of over 100 people in 11 centres in Spain and Germany)
- c) A science project (to be carried out during guaranteed time – 600+ nights)
- d) All of the above

What does CARMENES mean?

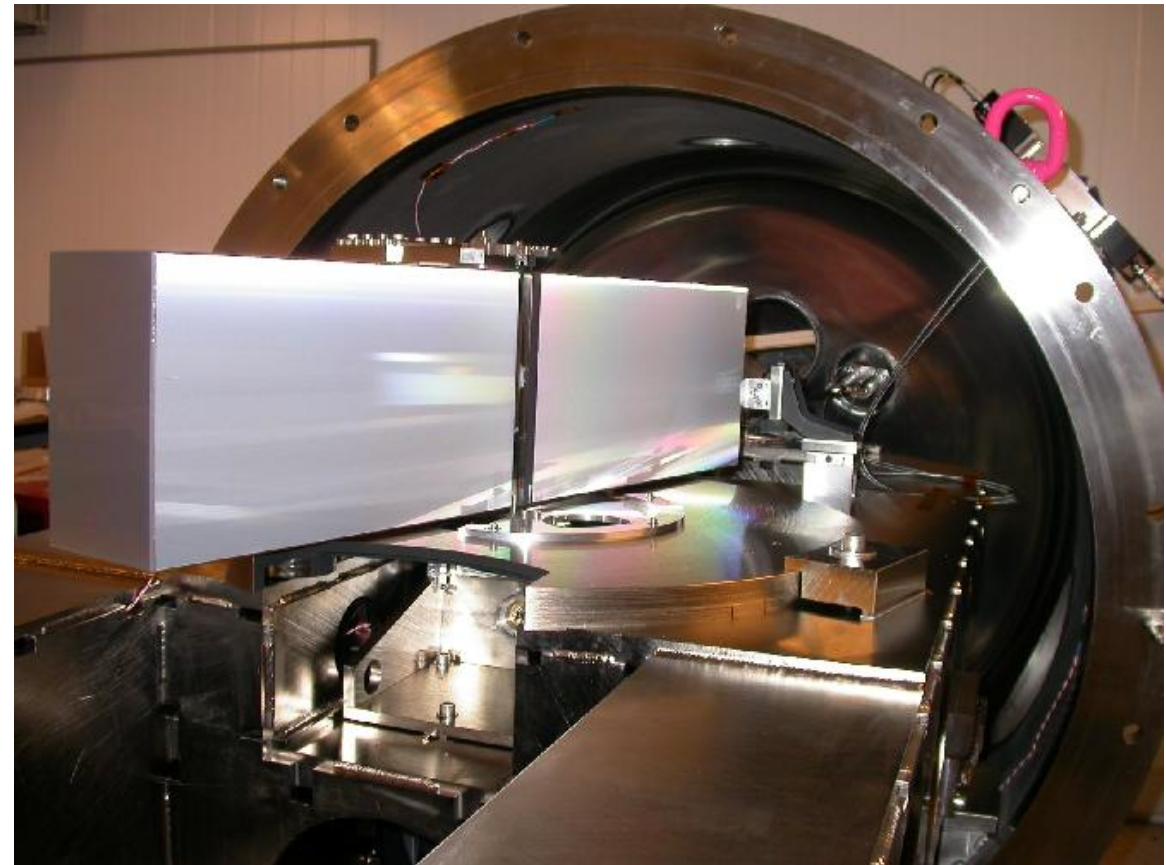

Calar **A**lto high **R**esolution
search for **M** dwarfs with
Exoeartths with **N**ear-
infrared and optical
Echelle **S**pectrographs

A bit of history: Feb 2003

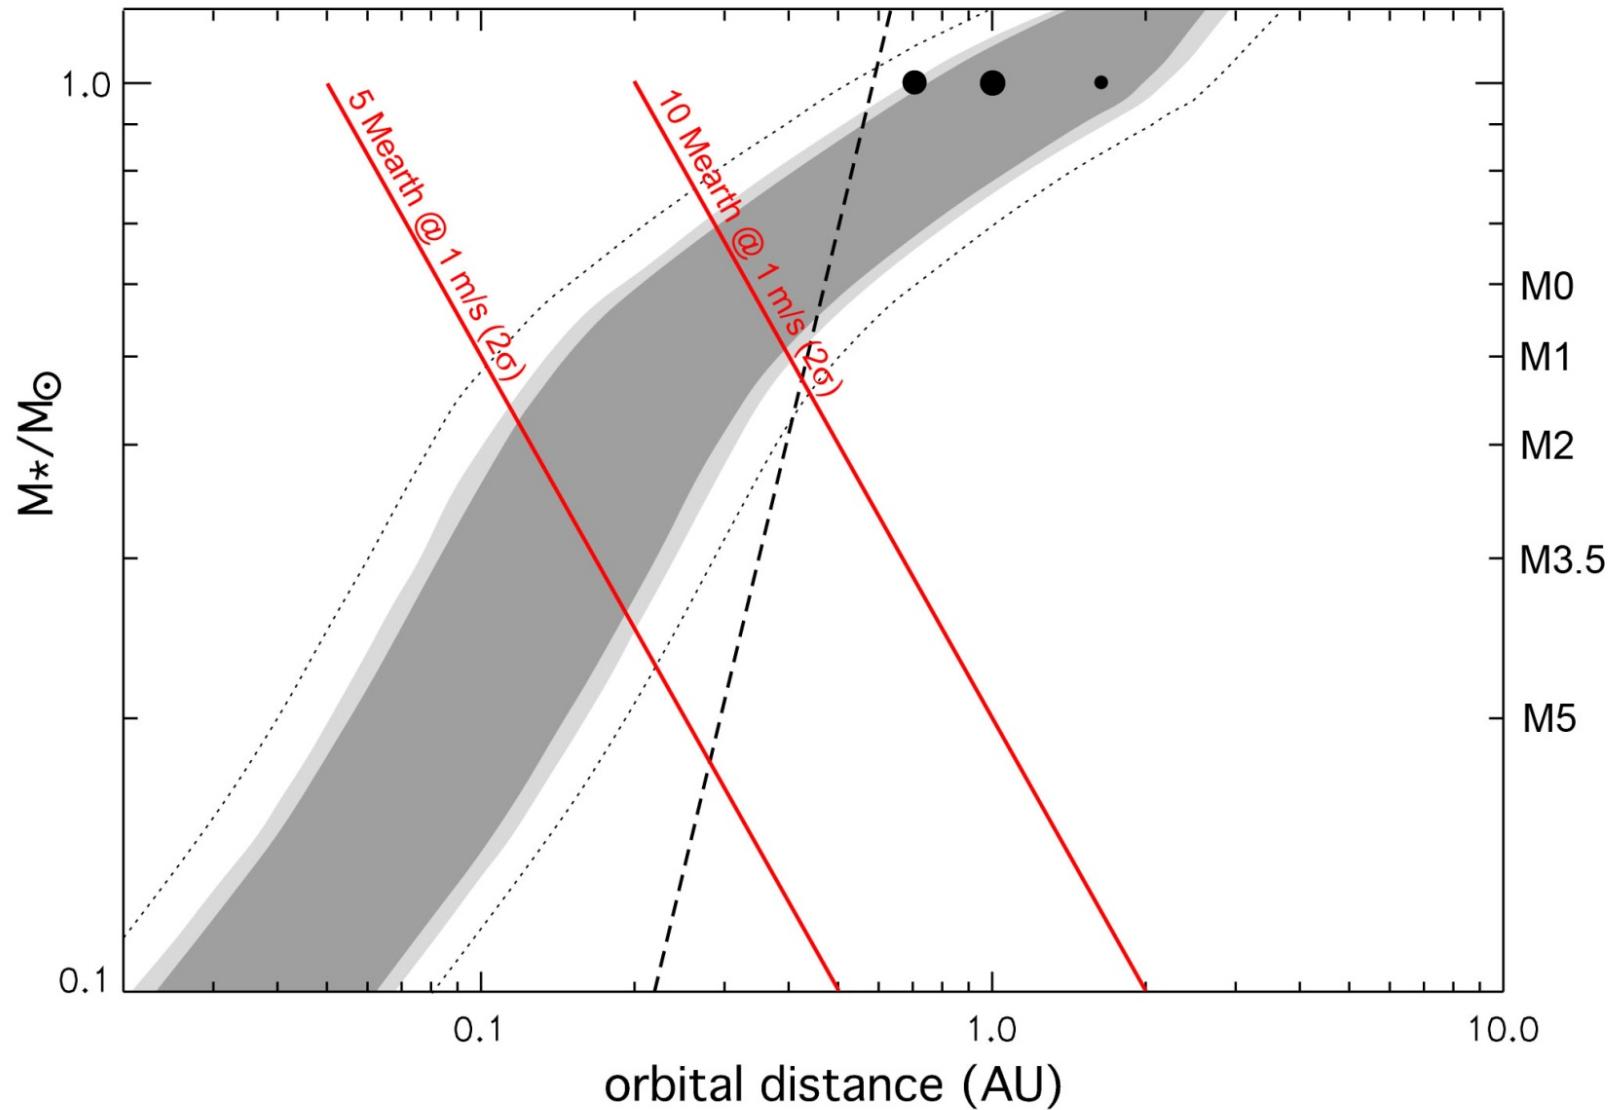

First light of
HARPS at the
ESO 3.6 m
telescope, the
“exoplanet
hunter”

(aka HARPS-
South...)

(the smaller, the better)

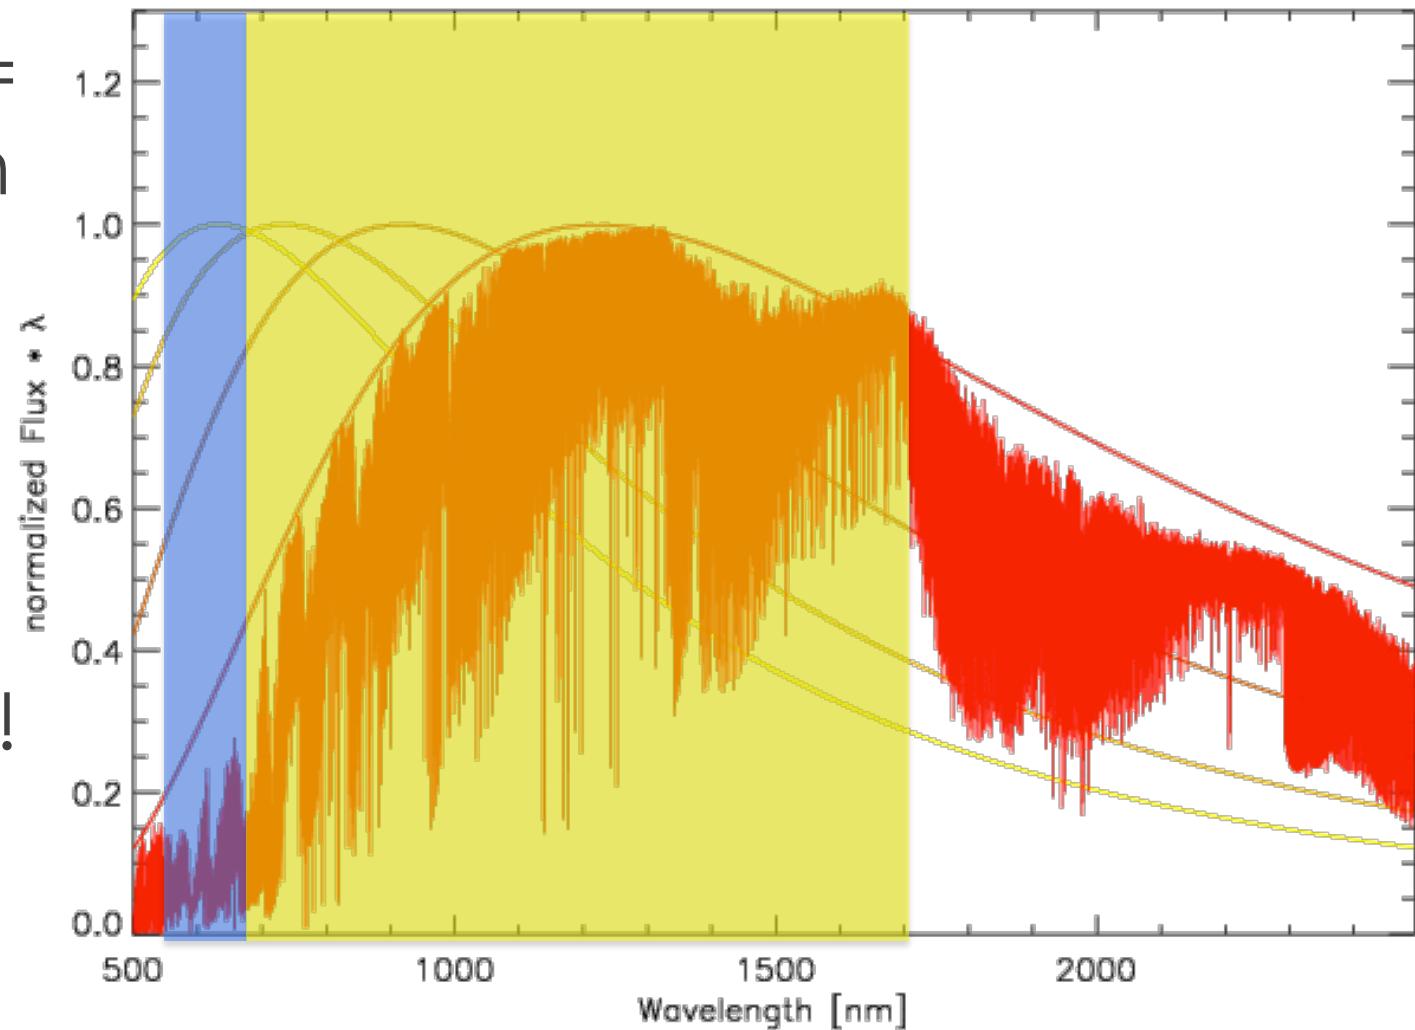

(the redder, the better)

HARPS $\Delta\lambda =$
533-691 nm

But M
dwarfs are
faint (and
active) in
the optical!

Report by the ETSRC on Europe's 2-4m OIR telescopes over the next decade

3.2.4 Near-IR, highly-stable high-resolution echelle spectrograph ($R \sim 70000$)

Science

Highly-stable, high-resolution spectrographs in the near-IR, capable of delivering RV with precision better than 1m/s are needed to conduct RV surveys of M dwarfs to find Earth-size planets in the habitable zone. Because of their low masses, radii and resultant low effective temperatures, M-type stars are more viable for RV detection of Earth-like planets at near-IR wavelengths.

A bit of history: Mar 2010

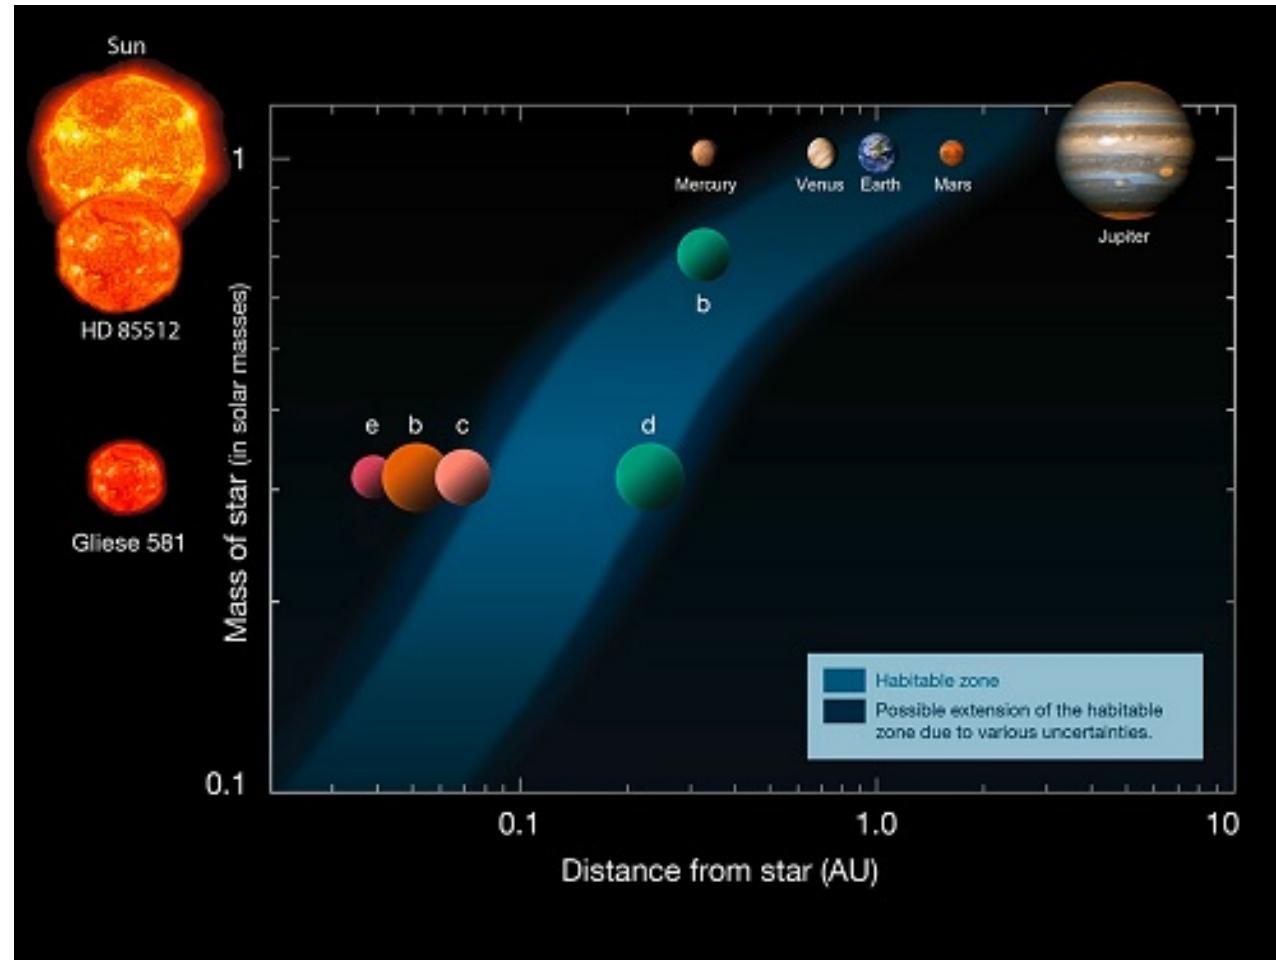

Report by the ETSRC on Europe's 2-4m OIR telescopes over the next decade

Capability		Explanation	
ID & hemisphere/aperture		problem	timescale/remedy
1-1: $R \sim 5000$ optical wide-field spectrograph	N/4m	WHT/WYFFOS multiplex + unvignetted field inadequate	~2015 on a 4-m
	S/4m	none available	new VISTA sp'graph after nir surveys
1-2: $R > 20000$ optical wide-field spectrograph	N/4m	not available – needs 2-deg corrector	gain early S experience (below); combine with 1-1 capability
	S/4m	(as north)	AAT/HERMES buy-in and/or VLT/FLAMES use preparatory to new build
2-1: highly stable $R \sim 10^5$ optical echelle sp'graph 2-3: $R \sim 70000$ nir echelle (with spectropolarimetry)	N/4m	HARPS-NEF private and temporary	alternative from end of MOU (CFHT pref.)
	either/4m	closest matches SPIRou, CARMENES not confirmed	~2015: support SPIRou or CARMENES
3-1: $500 < R < 5000$ opt+nir spectroscopy	S/4m	ageing EFOSC2, SOFI: prospect of no 2-4m sp'graph of the class in the south	upgrade needed by 2015

Towards the detection of exoearths

CARMENES [*kár-men-es*] (**C**alar **A**lto **h**igh-**R**esolution **s**earch for **M** dwarfs with **E**xoe**a**rth**s** with **N**ear-infrared and **o**ptical **É**chelle **S**pectrogr**aphs**) is a next-generation instrument being built for the 3.5m telescope at the Calar Alto Observatory by a consortium of German and Spanish institutions. It consists of two separated spectrographs covering the wavelength ranges from 0.5 to 1.0 μm and from 1.0 to 1.7 μm with spectral resolutions $R = 82,000$, each of which shall perform high-accuracy radial-velocity measurements ($\sim 1 \text{ m s}^{-1}$) with long-term stability. The fundamental science objective of CARMENES is to carry out a survey of ~ 300 late-type main-sequence stars with the goal of detecting low-mass planets in their habitable zones. We aim at being able to detect $2 M_{\text{Earth}}$ planets in the habitable zone of M5V stars. The CARMENES first light is expected to occur in Summer 2015.

<http://carmenes.caha.es/>

<http://carmenes.caha.es/>

carmenes

Summary of advantages

- Simultaneous near-infrared and visible observations
- Both high resolution and wide spectral coverage
- Dedication to stable high-precision radial-velocity survey of exoplanets around M dwarfs
- Long guaranteed time for the completion of the project
- Early first light with respect to “competitors”
- Plenty of planets for astro-statistics!

Final remarks

- You can do **your** science (whatever you like except exoplanets around M dwarfs) with CARMENES in open time
- Complementarity with current and near-future instruments (HARPS N&S, ESPRESSO, HPF...)
- Synergies with space missions: Gaia, TESS, JWST
- Pathfinder for E-ELT instrumentation
- And what about Calar Alto?
